

# War on diabetes

Hospital admissions due to diabetes long-term complications (2012-2014) crude rate, per 100,000 population

Costs to family and self

Costs to society

*The Health Ministry said the hospital admission due to diabetes long-term complications per 100,000 population increased by a 10.2% Compound Annual Growth Rate (CAGR) from 2012 to 2014. It further estimated that 30% or about one-third of this increase can be attributed to ageing. The admission rates are restricted to admissions due to diabetes long-term complications and do not include other admissions of patients who have diabetes.*
